

## Trapping Cages User Manual

### Trapping Pigeons

- 🐦 Place some bait inside the cage, leaving the doors open for easy entry and exit for the pigeons.
- 🐦 Do this in an area where you plan to place your pigeon trap. Let the pigeons feed off it for a few days to a week.
- 🐦 You will want the pigeons to get used to the trap's presence in their feeding or roosting area.
- 🐦 When you are ready to set the trap, spread the bait inside and all around the trap.
- 🐦 Watch how the birds will flock into the trap to eat the bait.
- 🐦 Make sure to put in fresh bait regularly. Make sure the trap is secure where you've placed it.

### Disposing of Pigeons

- 🐦 Drive a long distance and set the birds free. You won't want to let them go on your own property or they will just roost again in the same spot.
- 🐦 This will only really work well if your pigeons have only recently roosted on your property.
- 🐦 Pigeons that have been in a place for a long time will find their way back, even from a distance.
- 🐦 Killing the pigeons should only be a last resort when all humane methods have failed. You don't want to unnecessarily harm an animal.
- 🐦 Contact the Local SPCA on how to dispose of a large number of dead pigeons.
